

Company Policies & Information

Ordering

All moulding are priced by the linear foot - For customized lengths of any of our mouldings, we recommend putting your orders through our order form. One of our members will reach out to you to discuss your order and what we can supply. Even though we always do our best to match our customers' expectations, we always advise not to order exact amounts due to imperfections on lumber.

i.e an 8ft board could potentially be as short as 7.5 feet due to splits in the lumber ends.

Set-Up Charges

Set-up pricing revolves around quantity ordered and volume purchased per profile of each species. Any high volume, starting at 250' per profile ordered leads to bulk production that eliminates the set up fee. We encourage customers who are doing bulk orders to contact us so that we can adjust the surcharges accordingly.

Custom Mouldings

With many pre-designed options to pick from, we often are in a position to accommodate your next project. At times there maybe a profile needed that we have not yet used but we are flexible and can accommodate all of our customer's needs. All we need in this case is a sample board or a drawing of the molding and we'll produce custom tooling for your molding. A one-time tooling fee may be charged but this may be voided depending on the volume ordered. All custom tooling is manufactured in house and therefore helps us keep the tooling cost low and efficient. Unlike the standard market timing, we can do custom work in as short as one day. (Refer to our quotes for lead times).

Production Time

Our delivery times revolve around key factors such as; wood species availability, standard vs custom molding profiles, and more. Depending on the moulding specifications, the lead time can vary but still be delivered within a reasonable time period. Our Oak, Maple and Paint Grade moldings take an estimated 4 working days to produce while all other profiles can be processed within the same time period as cabinet doors where customers have the option to choose the lead time. A realistic lead time is best given during ordering and we advise our customers to always check the lead times per individual order.

Drawings

We have done our best to make drawings to scale, but we cannot guarantee them to be exact.

All Terms and Conditions are subject to www.rbmillwork.com. The catalogue is intended to be used as a guide and will be subject to revisions/corrections as we deem necessary. We reserve the right to change without notice.

Wood Types

Hard Maple	Clear Pine	Walnut - Clean no Knots
Soft Maple	Knotty Pine	Fir
Brown Maple (Character Maple)	Birch	Knotty Fir
Red Oak Flat Cut - Normal	Ash	Poplar - Paint Grade
Red Oak - Rift Cut	Elm	Aspen
White Oak Flat Cut - Normal	Calico Hickory - Clean no Knots	Knotty Alder
Whit Oak Rift Cut	Rustic Hickory	Clear Alder
Cherry	Rustic Walnut	

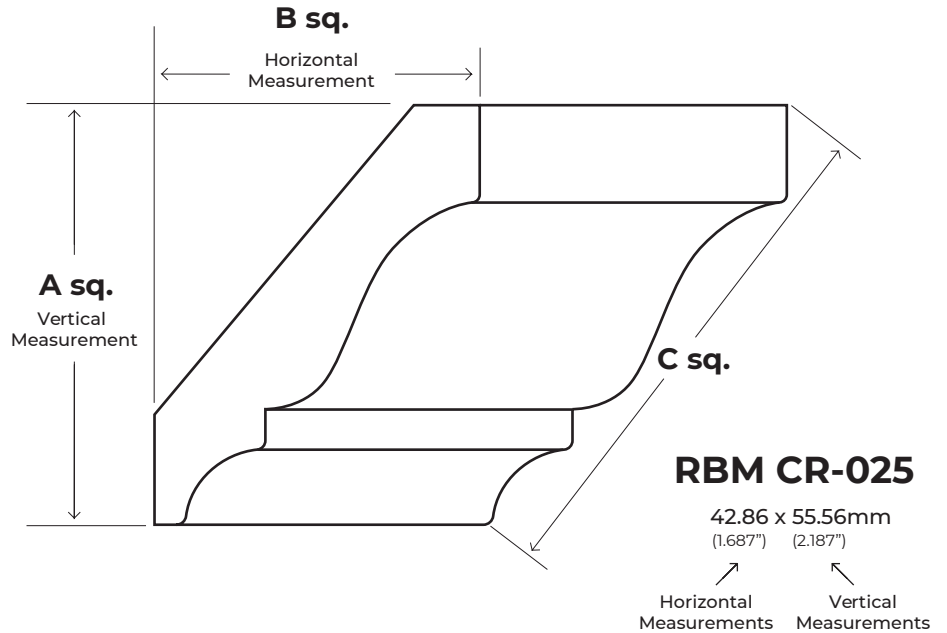

Don't see the wood type you're looking for? Contact us!

Measurements

Please refer to the following diagram to interpret moulding measurements stated on the quote/confirmation.

Our standard moulding capabilities is from 20mm wide to 230mm (y) and from 8mm thickness - 160mm (z)

Contact us if you need oversized/undersized mouldings or parts.

How to figure out the square root on a crown moulding

You have to go $A^2 + B^2 = C^2$.

If a crown is 2.312 up (Vertical) and 2.79 across (Horizontal)

$$2.79 \times 2.79 = 7.78$$

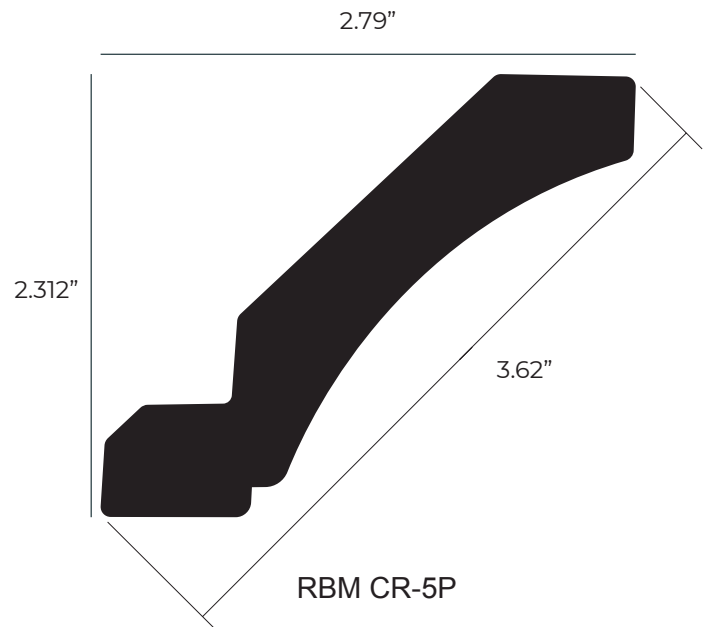

$$2.312 \times 2.312 = 5.345$$

$$7.78 + 5.345 = 13.125$$

Press the square root button ($\sqrt{\quad}$) on the calculator = **3.62"**

Remember

When doing the square root calculation you cannot go $2.312 \times 2 = 4.624$, you have to go $2.312 \times 2.312 = 5.345$

Applied Finished Corners

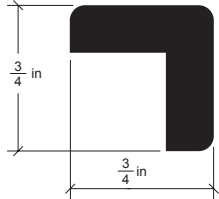

We can customize corners to your needs.
Any size, bevel outside, chamber radius, etc.

Standard wall thickness is 10mm (0.38").
Standard outside edge is 2mm.

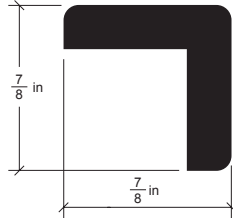

For custom sizes,
please provide both
inside & outside
measurements

Applied Finished Inside Corners

RBM AFICR-12

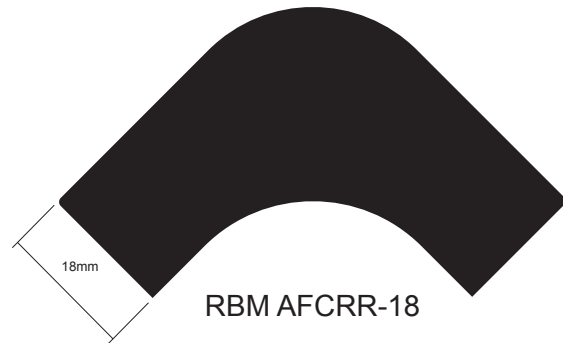

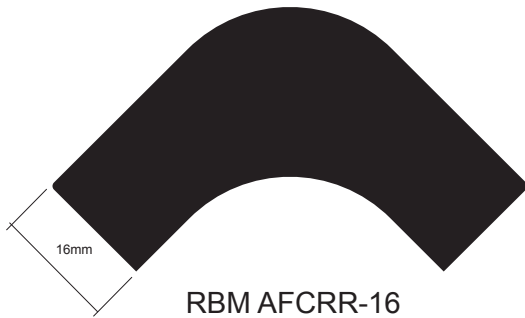

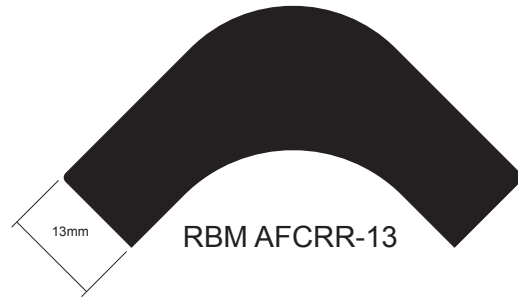

RBM AFICR-9

Applied finished inside corners are available
to accommodate for any baseboard thickness.

This is considered a radius front

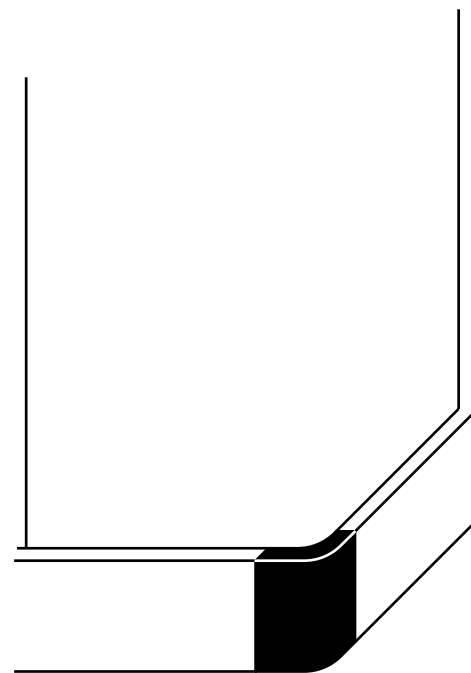

RBM AFCRD

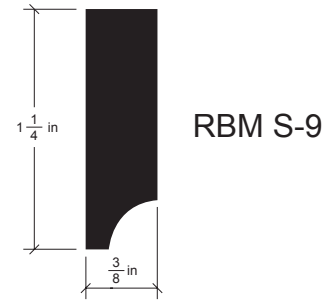

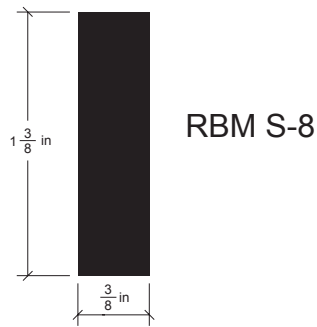

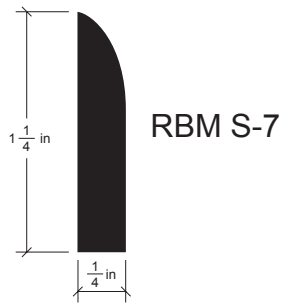

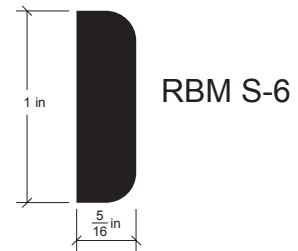

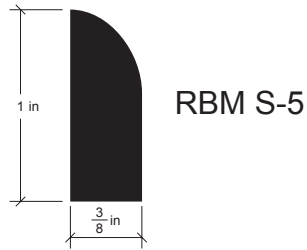

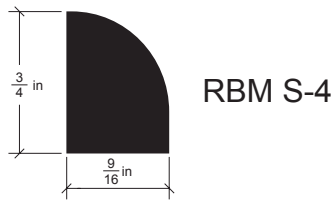

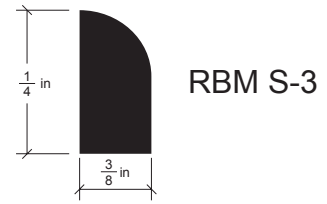

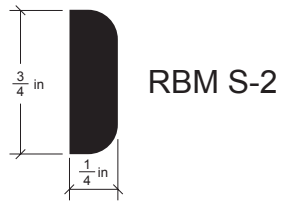

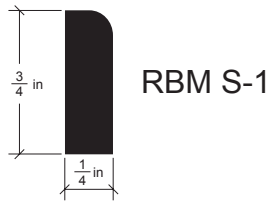

Diagonal front available on all Applied Finished Outside Corners - as shown here

Applied outside finished corners are available in any wall thickness.

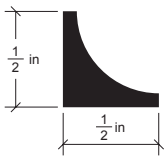

All outside edges comes standard with 1mm radius.

When providing us with information for surfaces please refer to this diagram. We will need to know the type of wood required, the cut desired (flat, rift, quarter cut etc.) **Length (x)**, **width (y)**, **thickness (z)**, edge profile, and linear feet required. Please note Face 5 refers to the top of the wood and Face 6 refers to the bottom.

If you need face 5 sanded please let us know. Our Normal/Standard finish Sand is 180grit. Unless otherwise specified.

Lengths:

8, 10, 12ft & Custom

Note: 10ft is the most popular, but we have or can get most requested length.
